

Demo runbook — Sanpras pitch

~8 min live. Two topics: 21 CFR Part 11 (3 min) + AI features (5 min). Click → narrate.

PRE-DEMO SETUP (DO THIS 2 MIN BEFORE THE CALL)

1. Open: <https://hawkeye-frontend-dev-chi.vercel.app>
2. Login as Priya — audit.program@acme-pharma.demo · AuditDemo@2026
3. Have 2nd tab ready: Asha (qa.head@globalpharma.demo) · Maria (audit.lead@auditcorp.demo)
4. Pick one audit ahead of time — recommend HK-0000000092-2026 (already in PREPARATION phase)

1 · 21 CFR Part 11 — show, don't tell

≈ 3 minutes

PRIYA (BUYER)

CLICK › Open audit HK-0000000092-2026 → click the ****Audit Log**** tab.

💡 This is your 21 CFR 11 audit trail. Every action — who, when, what changed, why. Immutable, append-only. Inspector asks for it, this is what they get.

SWITCH TAB → ASHA (SUPPLIER)

CLICK › Open the same audit → open the intimation letter → click ****Sign****.

💡 Watch the prompt: username, password, reason-for-signing. That's a Part 11 e-signature — same legal weight as a wet signature.

BACK TO PRIYA (BUYER)

CLICK › Audit detail → ****Tracking**** tab (the green/blue/yellow timeline).

💡 Every milestone is time-stamped at the server, immutable, ALCOA+. We give you the full IQ/OQ/PQ pack on day one — same evidence covers Part 11 AND EU Annex 11.

→ Bridge line: "That's three of eight Part 11 controls — the rest (RBAC, encryption, backup, validation) are in the compliance binder we'll leave with you."

2 · AI features — the strongest live demo

≈ 5 minutes

MARIA (AUDITOR)

CLICK › Open the EXECUTION-phase audit → pick a finding → click ****Draft observation with AI****.

💡 Six to ten hours of report drafting → about an hour of editing. Notice the inline citations like [Q1] [S1] — every claim links back to the source evidence. No black-box AI. Every assertion is auditor-traceable.

SWITCH TAB → ASHA (SUPPLIER)

CLICK › Open the PAQ on the seeded EXECUTION audit → click ****AI prefill from prior submissions****.

💡 Watch fields populate from earlier responses. You fill the PAQ once. The next buyer's PAQ inherits where it can. Audit prep — 2-3 weeks → 3 days.

→ Closing line: "Same pattern in every module — Deviation 5-why, CAPA RCA, Doc-control gap detection, MRM auto-aggregator, Reg-intel watcher. Twelve agents in total. Drafts, summarises, classifies, pre-fills. Humans approve. Citations always."

3 · Fallbacks — if something breaks live

IF...	THEN...
AI button is hidden	It's gated by AgentPermission — confirm tenant has AI_ASSISTANT module enabled in Admin Panel.
Audit Log tab missing	Use the Tracking tab instead — same time-stamped immutable record, just the milestone view.

IF...	THEN...
Maria can't see the audit	Cross-tenant bug (logged Issue #12). Re-assign via DB — script ready: scripts/diagnose-auditor-inbox.mjs.
Sign button does nothing	Known UX bug (Issue #11). Data DOES persist. Refresh the page to see updated state.

3-minute version: If you're tight on time: just do Part 11 step 1 (Audit Log) + AI step 1 (Observation Drafter). 3 minutes total. Both land the strongest punch.
