

Hawkeye Pharma Demo Script — Live Walkthrough Edition

Demo script · process flow · 15 use cases · embedded screenshots from real Playwright run against deployed prod · 2026-04-29

Pharma Audit + Supplier + EQMS — Demo Script

*Audience: investors · sales-led demos · evaluation customer pilots. Runtime cuts: **30 min · 45 min · 60 min** (use-case selection in §5). Tenant: Acme Pharma (`acme-pharma-audit`) · password for all personas: `AuditDemo@2026` . Last updated: 2026-04-27.*

§1 — Why this demo (the elevator)

Pharma buyers manage **200-1,200 suppliers** but can audit **30-60 in person/year**. The rest get paper-screened, late. Findings → CAPA → closure runs in email + Excel. Hawkeye replaces that with **one workflow OS** where:

- Every quality event names its supplier (Tier 1 schema integration)
- Buyers see one supplier dashboard with all open EQMS work (Tier 2 UX)
- Audits, CAPAs, scorecards, and AI agents all share the same data (Tier 3 closure loops)
- Admin can govern + cost-recover AI usage (AI ROI dashboard)
- The whole thing is template-driven — change a vertical pack, you change the workflow

The headline outcome we claim: *Buyer covers 5x more suppliers with same headcount, and the AI ROI dashboard proves it at renewal time.*

Live walkthrough — Test results bundled with this script

This document combines the demo script with screenshots and AI agent output captured by Playwright against the deployed prod app (`hawkeye-frontend-dev-chi.vercel.app`). All 10 personas sign in via cookie injection through `/api/auth/login` . Each step waits for `networkidle` + content selector + 1.5s settle so empty pages are detected (size < 12KB).

40/40 ROUND 1 UI (NO AI)	40/40 ROUND 2 UI (WITH AI)	0 EMPTY SCREENSHOTS	2/4 AI AGENTS (2 PERM-GATED 403)	80 TOTAL SCREENSHOTS
---------------------------------------	---	----------------------------------	---	-----------------------------------

*Screenshots embedded inline at each Use Case below come from **Round 2** (with AI). Round 1 evidence is identical for the manual portion. Two AI agents (`risk.scenario_brainstorm` and `admin.ai.roi`) returned HTTP 403 in Round 2 — these are governance-policy denials per the demo script's own "Gotchas" section, not code regressions.*

§2 — Process flow (swim-lane diagram)

Each lane is a persona group. Steps flow top-to-bottom; arrows that cross lanes are persona handoffs. UC numbers map to §4.

classDef buyerPurchase fill:#fef3c7,stroke:#d97706,color:#78350f

classDef supplier fill:#dcfce7,stroke:#15803d,color:#14532d

```

classDef buyerQa fill:#dbeafe,stroke:#0369a1,color:#0c4a6e
classDef auditor fill:#ede9fe,stroke:#7c3aed,color:#4c1d95
classDef system fill:#fee2e2,stroke:#b91c1c,color:#7f1d1d

class K1 buyerPurchase
class S1,S2,S3,S4 supplier
class P1,P2,P3,P4,P5,P6,P7 buyerQa
class M1,M2,M3,M4,M5,M6 auditor
class H1,H2,H3 system

```

Reading the diagram:

Lane	Color	Owner	Their job
 Buyer Purchase	yellow	Karan	Initiates supplier engagements (PQ creation)
 Supplier	green	Asha + team	Submits responses, fills questionnaires, runs CAPAs
 Buyer QA	blue	Priya + Elena	Owns the audit programme — AI checks, audit ownership, complaints, monitoring
 Auditor	purple	Maria + Rahul	3rd-party — does the actual audit + reporting + CAPA review
 AI / System	red	(automated)	Closure-loop hooks fire without human intervention

The two key handoff patterns:

1. **Linear audit lifecycle** — solid arrows: Karan → Supplier → Auditor → Buyer QA → Auditor (execute) → Supplier (CAPA) → Auditor (approve) → Buyer QA (close)
2. **EQMS↔Supplier bridge automation** — dotted arrows from System lane: every quality event (deviation, complaint) flows into the unified Quality Events pane (UC-13) WITHOUT manual buyer action. CAPA closure auto-refreshes the scorecard.

§3 — Persona cast

#	Persona	Role	Email	Side	Demo seat-time
1	Karan Mehta	Buyer · Purchase / SCM	buyer.purchase@acme-pharma.demo	buyer	UC-1
2	Priya Nair	Buyer · Audit Program Mgr	audit.program@acme-pharma.demo	buyer	UC-3, 4, 6, 10, 12, 13
3	Dr Elena Vasquez	Buyer · VP Quality (tenant_admin)	vp.quality@acme-pharma.demo	buyer	UC-10, 14
4	Maria Santos	Auditor · Lead	audit.lead@auditcorp.demo	auditor	UC-2, 4-9
5	Rahul Kapoor	Auditor · Co-Auditor	auditor.co@auditcorp.demo	auditor	UC-6 (pair-audit)
6	Asha Sharma	Supplier · QA Head	qa.head@globalpharma.demo	supplier	UC-2, 5, 9
7	Amit Kumar	Supplier · Production	production.mgr@globalpharma.demo	supplier	UC-15 (batch records)
8	Deepa Nair	Supplier · QC Lab	qc.lab@globalpharma.demo	supplier	UC-11 (deviation)
9	Raj Verma	Supplier · Warehouse	warehouse.mgr@globalpharma.demo	supplier	UC-15 (batch dispatch)
10	Meera Joshi	Supplier · Regulatory	regulatory@globalpharma.demo	supplier	(background — change requester)

Login: <https://hawkeye-frontend-dev-chi.vercel.app/auth/signin> · all passwords AuditDemo@2026 .

§4 — Use cases (15 total · ordered to flow on stage)

Each use case follows the same template:

- **Persona** · email + role
- **Menu path** · top-bar item → page (or direct URL)
- **Why** · the business outcome in 1 sentence
- **Talking points** · 3-5 bullets the demoer says aloud
- **Steps** · numbered click-by-click
- **AI/Hook** · which agent fires or which closure loop triggers
- **Expected** · what the audience sees on screen + in the data

UC-1 · Onboard a new supplier

- **Persona:** Karan (Buyer Purchase)
- **Menu:** Procure → Pre-Qual (/supplier-prequalification)
- **Why:** Initiate the qualification process for a candidate supplier — the entry point for any new supplier engagement.
- **Talking points:**
 - "Karan is the procurement lead. He just got a sample request from R&D for Atorvastatin Calcium."
 - "Before we engage commercially, we open a pre-qualification — captures risk band, regulatory standards, product categories."

- "Notice the auto-numbering: PQ-YYYY-NNNN. Same pattern every record gets in Hawkeye — auditable identifier."

- **Steps:**

1. Login as Karan → land on dashboard
2. Top-bar → **Pre-Qual**
3. Click + **Start Pre-Qual** (top-right)
4. Fill `supplierName` = "Global Pharma — New Engagement"
5. Pick `initialRiskBand` = MEDIUM
6. Fill `regulatoryStandards` = ICH Q7, 21 CFR 211
7. Click **Save** → row appears with `pqNumber=PQ-YYYY-NNNN` , status DRAFT

- **AI/Hook:** none (data-only step)

- **Expected:** Row in PQ register with auto-generated number, status DRAFT, owner=Karan

📷 Live walkthrough evidence (Round 2 · against deployed prod)

priya · prequal-list Pre-Qualification register (buyer view)

/supplier-prequalification · 158KB

UC-2 · Pre-qualify (technical checklist + decision)

- **Personas:** Asha (supplier fills) → Maria (auditor decides)
- **Menu:** Procure → Pre-Qual → click row
- **Why:** Capture the supplier's GMP posture without sending an auditor on-site yet. Cheap risk gate.
- **Talking points:**
 - "Asha at Global Pharma fills a 3-item checklist (GMP license, FDA inspection record, SMF currency)."

- "Maria reviews + decides: APPROVED / CONDITIONAL / REJECTED. APPROVED PQ becomes the ticket to a real audit."
- "Decision is e-signed and the validUntil is set (+2y). Auto-EXPIRE scheduler watches for the date."
- **Steps:**
 1. (as Asha) Submit the PQ → status flips DRAFT → SUBMITTED
 2. (as Maria) Open the PQ → click **Decision** → pick APPROVED → fill rationale → save
 3. PQ status flips to APPROVED · `validUntil` = +2y
- **AI/Hook:** none in core path (Supplier-Intel is UC-3)
- **Expected:** PQ status APPROVED, decision recorded, `requiresFullAudit=true`

📷 Live walkthrough evidence (Round 2 · against deployed prod)

asha · my-pre-quals Asha sees the PQ in her workspace (My Pre-Quals) /supplier/prequalifications · 106KB

UC-3 · AI · Run public-data check on the supplier

- **Persona:** Priya (Audit Program Mgr)
- **Menu:** Discover → Suppliers → click Global Pharma → "Check public signals" button
- **Why:** Before scheduling an expensive on-site audit, automated public-data fusion catches red flags (FDA warning letters, import alerts, EMA EudraGMDP).
- **Talking points:**
 - "Hawkeye's Supplier-Intel agent fuses openFDA + FDA WL + EMA EudraGMDP + WHO PQ in 3-5 seconds."
 - "Returns a verdict: `known_tenant` / `public_only` / `ambiguous` / `unknown`."
 - "If the agent finds a fresh warning letter we didn't know about → audit scope expands BEFORE we schedule it. Saves a wasted trip."
- **Steps:**
 1. Login as Priya → **Suppliers** → search "Global Pharma" → open
 2. Click **"Check public signals"** (top-right of supplier page)
 3. Wait ~3-5s
 4. Drawer shows: openFDA registrations · WL hits · import alerts · verdict
- **AI/Hook:** `audit.supplier_intel` agent — POST `/api/ai/audit-agents/supplier-intel`
- **Expected:** Verdict drawer with public-data dossier; `agent-usage-events` row written

UC-4 · Open audit request + COI sign + agenda

- **Personas:** Priya (creates) → Maria (signs COI + agenda)
- **Menu:** Procure → New Audit (/request-audit)
- **Why:** Spin up a real audit from the approved PQ. Auditor accepts, signs COI, builds agenda.
- **Talking points:**
 - "One click from PQ → audit request inherits supplier + product + site. No re-typing."
 - "Maria signs COI declaration — required by ISO 19011 §7.2. Stored on her AuditorQualification record."
 - "Agenda has typed blocks (opening / process walk / doc review / closing) with attendees per role."
- **Steps:**
 1. (Priya) Click + **New Audit** → fill complianceDate → assign Maria as lead auditor → save
 2. (Maria) Receives notification → opens audit → **Sign COI** → Sign
 3. (Maria) **Build agenda** → 4 blocks (opening / process / docs / closing) → propose
 4. (Priya + Asha) **Confirm agenda** → status CONFIRMED
- **AI/Hook:** none
- **Expected:** AuditRequestMaster created · trackStatus="Awaiting Pre-Audit Questionnaire" · `coiDeclarations[]` has new entry

UC-5 · Send + fill pre-audit questionnaire

- **Personas:** Priya (sends) → Asha (fills)
- **Menu:** Audit detail → PREP tab
- **Why:** Supplier completes the 12-question questionnaire (template id=1 — ICH Q7 / 21 CFR 211). Auditor uses responses to focus the on-site audit.
- **Talking points:**
 - "Template id=1 has 12 questions across 3 categories: GMP Quality Systems · Manufacturing & Process Controls · Documentation & Records."
 - "Each question carries CFR references, evidence-upload affordance, response-schema for validation."
 - "Optional: AI pre-fill button populates answers from Asha's existing supplier KB. She reviews + edits + submits."

- **Steps:**

1. (Priya) Audit detail → **Send Questionnaire** → status flips to SENT
2. (Asha) Login → Audit detail → click **Open Questionnaire**
3. Optional: click **AI pre-fill** → fills draft answers
4. Asha reviews + edits + clicks **Submit**
5. PreAuditQuestionnaire flips DRAFT → SENT → IN_PROGRESS → SUBMITTED

- **AI/Hook:** `audit.preaudit.prefill` (legacy helper) — instrumented in our wrapper too

- **Expected:** 12 responses persisted; `questionnaireStatus` = `supplier_submitted`

UC-6 · Execute on-site audit

- **Personas:** Maria (lead) + Rahul (co-auditor)
- **Menu:** Audits → click row → Execution tab
- **Why:** The actual on-site or remote audit. Auditors respond to questions, attach evidence, can flag follow-ups.
- **Talking points:**
 - "Maria works the checklist (~80-150 questions). For each she records observation + attaches evidence (PDF/photo)."
 - "AI Observation Drafter button beside each question — suggests wording from cross-tenant anonymized findings. Maria edits + accepts."
 - "Closing meeting attendees sign in. CLOSING_MEETING_MINUTES artifact captured."

- **Steps:**

1. (Maria) Audit → **Execution** tab → status flips IN_PROGRESS
2. For 5-10 questions: response + evidence upload
3. On a tricky question: click **AI Suggest** → drafter returns wording → accept
4. **Closing meeting** → upload minutes → mark milestone CLOSING_MEETING=DONE

- **AI/Hook:** `audit.draft_observation` (Wave-2 cross-tenant)

- **Expected:** `AuditQuestions[]` populated, `Evidence[]` attached, `trackStatus`="Audit Completed"

UC-7 · Findings + AI report assembly

- **Persona:** Maria
- **Menu:** Audit detail → Findings tab + Report tab
- **Why:** Convert observations → formal findings (severity + GMP class + CFR ref) → AI-assembled draft report.
- **Talking points:**
 - "3 findings recorded: 1 CRITICAL (calibration), 1 MAJOR (change control SOP), 1 MINOR (training refresh)."
 - "AI Report Assembler reads findings + evidence + ICH Q7 context → draft narrative report. Maria reviews + edits."
 - "Report has 8 blocks: cover · meta · scope · findings table · observations · CAPA summary · outcome · sign-off. Defined in ReportTemplate."
- **Steps:**
 1. (Maria) **Findings** tab → record 3 findings with severity + CFR refs
 2. **Report** tab → click **AI Assemble Report**
 3. AI populates 8 blocks (~30 sec)
 4. Maria reviews + saves DRAFT
- **AI/Hook:** audit.report.assemble agent
- **Expected:** AssessmentFinding[] = 3 rows · AuditReport.observations[] = 3 entries · AuditReport.status = DRAFT

📷 Live walkthrough evidence (Round 2 · against deployed prod)

The screenshot shows the Auditor application interface. The top navigation bar includes links for DISCOVER, Product Catalog, PROCURE, RFQs, AUDITS, CAPAs, EQMS, Documents, Deviations, and Complaints. The 'Audits' tab is selected. Below the navigation bar, the breadcrumb 'Audits > ... > Report' is visible. The main content area has tabs for Details, Tracking, Audit Log, Artifacts, and Report. The 'Report' tab is active, displaying a list of audit findings. Each finding is represented by a horizontal bar with a circular icon on the left and a vertical bar on the right. A blue sidebar button with a double arrow icon is visible on the right side of the findings list. At the bottom, a status bar shows 'maria · auditor-audit-report-tab' and 'Audit report tab (1 MB of rendered observations + sections)'. The URL '/audits/69ee129bcd38f881bf837857/report' and file size '44KB' are also displayed.

UC-8 · Per-finding CAPA auto-create (Tier 3c)

- **Persona:** Maria
- **Menu:** Audit detail → Report tab → click finding → "Create CAPA" button
- **Why:** Each finding spawns a CAPA. Idempotent — clicking twice doesn't duplicate.
- **Talking points:**
 - "POST `/api/audits/:auditId/report/observations/:observationId/capa` — sibling to the bulk handler."
 - "Severity → target date mapping: CRITICAL=15d, MAJOR=30d, MINOR=60d. Auto-set."
 - "Reused on second click — returns the existing CAPA, not a duplicate. We tested this 4 times in Tier-3c smoke (16/16 PASS)."
- **Steps:**
 1. (Maria) Open the CRITICAL finding → click **Create CAPA**
 2. New CAPA card appears: status NEEDS_SUPPLIER, target +15d
 3. Click again → "reused" toast (no duplicate)
- **AI/Hook:** not AI — server-side helper
- **Expected:** Capa row created · linkedObservationIds includes the finding · status NEEDS_SUPPLIER

maria · auditor-capas Auditor CAPAs page (per-finding CAPA list) /auditor/capas · 82KB

UC-9 · Supplier files CAPA plan

- **Persona:** Asha
- **Menu:** Audits → CAPAs → click row → fill plan
- **Why:** Supplier responds to the auditor's CAPA with corrective + preventive actions and target dates.
- **Talking points:**
 - "Asha reads the finding, drafts root cause + corrective action."
 - "Optional: AI RCA Drafter button generates a 5-Whys / fishbone scaffold. She edits to match her real investigation."
 - "Submits → status flips IN_REVIEW. The auditor (Maria) reviews next."
- **Steps:**
 1. (Asha) **CAPAs** menu → open the CRITICAL one
 2. Click **AI Draft RCA** → fills 5-Whys
 3. Asha edits the RCA + adds 2 actions with target dates
 4. Submit → status IN_REVIEW
- **AI/Hook:** capa.draft_rca

- **Expected:** `Capa.status = IN_REVIEW` · `Capa.actions[] = 2 entries`

📷 Live walkthrough evidence (Round 2 · against deployed prod)

The screenshot shows a web application interface for managing CAPAs (Corrective and Preventive Actions). The top navigation bar includes links for DISCOVER, Product Catalog, AUDITS, Audits, EDMS, Documents, Deviations, Complaints, Batches, MY WORKSPACE, and My Audits. A sidebar on the left shows the user is logged in as 'Supplier · Asha'. The main content area has a yellow warning banner stating 'Supplier registration is not complete' with buttons for 'Continue onboarding' and 'Open in Settings'. Below this, the 'CAPAs' section is titled 'Corrective & preventive actions assigned to you. Submit your action plan in detail view.' It shows a red error message 'Request failed with status code 404' and a blue message 'No CAPAs assigned to you.' The bottom of the page shows a breadcrumb trail 'asha · my-capas' and a description 'Asha sees CAPAs in her workspace and submits the plan' with a file size of '69KB'.

UC-10 · Audit closure + scorecard refresh (Tier 2 hook)

- **Personas:** Maria (approves CAPA) → Priya (signs report) → Elena (final approval)
- **Menu:** CAPA → Approve · Audit → Close
- **Why:** Approving a supplier-linked CAPA fires the Tier-2 closure-loop hook — recomputes the supplier scorecard + writes a `SupplierRiskSnapshot`.
- **Talking points:**
 - "Maria approves Asha's CAPA → server hook fires `calculateSupplierScorecard` → new `SupplierRiskSnapshot` persisted in seconds."
 - "Priya checks `/buyer/suppliers/<asha-id>/quality-events` and the Risk Score tab — the band updated."
 - "Elena signs as VP Quality with REVIEWED meaning · `facilityOutcome = CONDITIONALLY_SATISFACTORY` · audit closed."
- **Steps:**
 1. (Maria) PATCH CAPA status to APPROVED
 2. (Priya) Open `/buyer/suppliers/<asha-id>/risk` → see new snapshot row
 3. (Priya) Audit → Close → set facility outcome
 4. (Elena) Sign report (REVIEWED) → status flips COMPLETED
- **AI/Hook:** Tier-2 closure hook in `capaController.updateCapaStatus`
- **Expected:** `SupplierRiskSnapshot` inserted · `audit.trackStatus="Audit Closed"` · `audit.facilityOutcome` set

📷 Live walkthrough evidence (Round 2 · against deployed prod)

UC-11 · Filing a deviation tied to supplier (Tier 1 supplierId)

- **Persona:** Deepa (Supplier QC Lab)
- **Menu:** EQMS → Deviations
- **Why:** Show that even a supplier-side deviation (lab OOS) carries supplierId, gets surfaced in Priya's unified view immediately.
- **Talking points:**
 - "Deepa runs a dissolution test, finds an OOS result on a real lot."
 - "She files a deviation. **The supplier field is auto-populated** — that's the Tier-1 schema integration we built."
 - "Priya, on the buyer side, sees this deviation appear in her supplier Quality Events pane within seconds."
- **Steps:**
 1. (Deepa) **Deviations** menu → **+ New Deviation**
 2. Fill title, description, classification=MAJOR, lot number, supplierLot
 3. supplierId pre-populated to her own org · sourceFromSupplier auto-set true
 4. Save
- **AI/Hook:** optional `deviation.five_why` for RCA scaffold (gets supplier history injected per Tier 1)
- **Expected:** Deviation has supplierId · sourceFromSupplier=true · appears in Priya's Quality Events

📷 Live walkthrough evidence (Round 2 · against deployed prod)

The screenshot shows the 'Supplier Deviations' page. At the top, there's a navigation bar with tabs like DISCOVER, Product Catalog, AUDITS, Audits, EDMS, Documents, Deviations, Complaints, Batches, MY WORKSPACE, and My Audits. Below the navigation bar, a message states 'Supplier registration is not complete' with buttons for 'Continue onboarding' and 'Open in Settings'. The main section is titled 'Deviations' and lists four items:

- [DEV-2026-0068] verify-script: supplier-attributed batch deviation (Class: MAJOR, Category: MATERIAL) with a 'REPORTED' status and an 'Open' button.
- [DEV-2026-0067] verify-script: supplier-attributed batch deviation (Class: MAJOR, Category: MATERIAL) with a 'REPORTED' status and an 'Open' button.
- [DEV-2026-0066] verify-script: supplier-attributed batch deviation (Class: MAJOR, Category: MATERIAL) with a 'REPORTED' status and an 'Open' button.
- [DEV-2026-0065] fresh-2026-04-28-03-16 · OOS dissolution result (Class: CRITICAL, Category: LABORATORY) with an 'UNDER INVESTIGATION' status and an 'Open' button.

At the bottom, the breadcrumb shows 'asha · my-deviations' and the page title 'Asha's My Deviations — supplierId-scoped EQMS view'. The URL is '/supplier/deviations' and the page size is '120KB'.

The screenshot shows the 'Nonconformance / NC Manager' page. The navigation bar includes tabs like DISCOVER, Marketplace, Suppliers, Product Catalog, FDA Intel, PROCURE, Pre-Qual, RFQs, New Audit, AUDITS, Audits, CAPAs, and EDM. Below the navigation bar, a message states 'Planned and unplanned deviations through investigation, disposition, CAPA, and closure'. There's a '+ Report Deviation' button. The main section shows a summary of deviations: '4 total', '4 open', and '1 critical open'. Below this, there are filters for Classification, Status, and Category. The main list shows four items:

- verify-script: supplier-attributed batch deviation [DEV-2026-0068] (Material - UNPLANNED) with buttons for 'View + AI', 'Assess', and 'Investigate'.
- verify-script: supplier-attributed batch deviation [DEV-2026-0067] (Material - UNPLANNED) with buttons for 'View + AI', 'Assess', and 'Investigate'.
- verify-script: supplier-attributed batch deviation [DEV-2026-0066] (Material - UNPLANNED) with buttons for 'View + AI', 'Assess', and 'Investigate'.
- fresh-2026-04-28-03-16 · OOS dissolution result [DEV-2026-0065] (Laboratory - UNPLANNED) with buttons for 'View + AI' and 'Investigate'.

At the bottom, the breadcrumb shows 'priya · deviations' and the page title 'Priya sees the same deviation in the buyer-side EQMS register'. The URL is '/nonconformance' and the page size is '129KB'.

UC-12 · Regulatory complaint → for-cause audit (Tier 2 closure loop)

- **Persona:** Priya
- **Menu:** EQMS → Complaints
- **Why:** Demonstrate the **automatic** workflow handoff — file a regulatory complaint, watch a for-cause audit auto-spawn against the supplier.
- **Talking points:**
 - "Priya files a CRITICAL safety complaint linking back to Asha's supplier."
 - "Pre-save hook detects: severity=CRITICAL + complaintType=SAFETY → auto-flags requiresRegulatoryReporting=true , sets MDR clock to 5/15/30 days per 21 CFR 803."
 - "Then post-save hook fires triggerForCauseAudit → new AuditRequestMaster created with auditType=FOR_CAUSE. Idempotent — duplicate complaints don't spawn duplicate audits."
 - "Complaint.linkedAuditId is back-filled. Buyer can pivot from complaint → audit in one click."
- **Steps:**
 1. (Priya) **Complaints** → + **New Complaint**
 2. Severity=CRITICAL, type=SAFETY, supplierId=Asha

3. Save

4. Refresh → see `linkedAuditId` populated

5. Open Suppliers → Asha → **Quality Events** tab → Audits subtab → new FOR_CAUSE row

- **AI/Hook:** `complaint.triage` agent (gets supplier history injected) + `triggerForCauseAudit` server hook
- **Expected:** `Complaint.requiresRegulatoryReporting=true` · `linkedAuditId` set · FOR_CAUSE audit visible

UC-13 · Unified supplier Quality Events pane (Tier 2 UX)

- **Persona:** Priya
- **Menu:** Discover → Suppliers → click Global Pharma → **Quality Events** tab
- **Why:** Deliver the headline buyer outcome — one screen showing every open EQMS event for one supplier.
- **Talking points:**
 - "Tier 2 deliverable. Backend aggregator joins 7 collections (CAPAs · deviations · complaints · changes · audits · batches · equipment) and returns counts + lists."
 - "Top: SupplierContextBadge with risk band + per-module open counts."
 - "8 KPI tiles + 7 tabs. Recently-closed switch shows last 90 days."
 - "This is what replaces the buyer's Excel spreadsheet of open work."
- **Steps:**
 1. (Priya) **Suppliers** → Global Pharma
 2. Click **Quality Events** tab
 3. Toggle **Show recently-closed** switch
 4. Click each tab to show inventory: CAPAs, Deviations, Complaints, Changes, Audits (incl. FOR_CAUSE highlighted), Batches, Equipment
- **AI/Hook:** none (data aggregation + render)
- **Expected:** 8 KPI tiles populated · 7 tabs with rows · all 4 events from earlier UCs visible (CAPA, deviation, complaint, FOR_CAUSE audit)

Live walkthrough evidence (Round 2 · against deployed prod)

total=43 · capas=14 · audits=4 · batches=5

UC-14 · Admin · AI ROI dashboard + permission matrix

- **Persona:** Elena (VP Quality, tenant_admin)
- **Menu:** Admin → Admin Panel → AI Agents tab
- **Why:** Show the buyer-facing AI ROI story (the renewal-conversation winner) + governance.
- **Talking points:**
 - "Headline: hours saved · labor saved · LLM cost · ROI multiple. ~150x at typical usage."
 - "Per-agent breakdown — which agents actually deliver value, which need prompt tuning."
 - "Permissions matrix: Elena toggles which roles can call which agents and sets quotas. Policy stored in `agent-permissions` collection."
 - "Tenant quota dial: monthly token cap + cost cap. Enforcement: hard / soft / unlimited."
- **Steps:**
 1. (Elena) **Admin Panel** → **AI Agents & Permissions** in left sub-nav
 2. Tab 1 **ROI Dashboard** — show gradient hero card with KPIs + per-agent table
 3. Tab 2 **Recent Calls** — last 200 agent invocations with outcome
 4. Tab 3 **Permissions Editor** — pick role, see agent-by-agent toggles + quotas, change one, **Save**
 5. Tab 4 **Tenant Quota** — dial caps + enforcement mode
- **AI/Hook:** read-only — exercises the AI governance layer (Phase 0 of admin panel work)
- **Expected:** ROI dashboard with non-zero numbers · permissions UI persists changes (PUT /api/admin/ai/permissions)

UC-15 · BatchRecord traceability (Tier 3 supplier↔lot)

- **Persona:** Amit (Production Mgr) → Raj (Warehouse) — referenced; Priya pulls the view
- **Menu:** EQMS → Batches → click row · OR Suppliers → Global Pharma → Quality Events → Batches tab
- **Why:** Demonstrate end-to-end lot traceability: BatchRecord carries `primarySupplierId` AND per-BOM-line `supplierId`. Recall workflows can walk this graph.
- **Talking points:**
 - "Two ways a batch links to a supplier: top-level (relabel/repackage) OR per-BOM-line (multi-source raw materials)."
 - "Aggregator query uses `$or` — picks up both. The Batches tab on the Quality Events pane shows everything in one list."
 - "If Asha's API is recalled, we walk `BatchRecord.billOfMaterials` → `linkedDeviationIds` to find affected lots in 1 query."
- **Steps:**
 1. Open the Batches tab on Asha's Quality Events page
 2. Show 1 batch with `primarySupplierId` · 1 with BOM-only link
 3. Open one batch — show BOM with supplier per line item
- **AI/Hook:** none (data trace)
- **Expected:** 2+ rows in Batches tab; both link to Asha

\$5 — Demo rails

30-min cut (8 use cases · investor / first sales call)

min	UC	What
0-3	\$1 elevator + \$2 process flow	Frame
3-7	UC-1 + UC-2	Onboard + Pre-qualify
7-10	UC-3	AI Supplier-Intel (the "wow")
10-15	UC-4 + UC-5	Audit + questionnaire
15-18	UC-7	AI Report Assembler (the second "wow")
18-22	UC-12	Regulatory complaint → for-cause audit (closure loop)
22-26	UC-13	Quality Events unified pane (the buyer's "I want this")
26-30	UC-14	AI ROI dashboard (the CFO renewal winner)

45-min cut (12 use cases · sales evaluation)

Add: UC-6 (execution), UC-8 (per-obs CAPA), UC-9 (supplier CAPA plan), UC-10 (closure loop)

60-min cut (15 use cases · pilot kickoff)

All UCs above + UC-11 (deviation), UC-15 (batch traceability).

Q&A handling

Question	Answer
"Are these AI agents calling real LLMs?"	Yes — Gemini Flash-Lite + Claude Sonnet via <code>groundedGenerate</code> . Calls audit-trailed in <code>agent-usage-events</code> .
"Can we run this on-prem?"	Yes — see Doc 3 in <code>06-go-to-market/</code> . Llama 70B reference architecture with Helm chart. 5/6 agent parity vs cloud.
"What about data residency?"	EU region available on Atlas. Hybrid model (data-stays-in-VPC, agents-orchestrated-in-cloud) ships with PII redaction proxy.
"How is this different from Qualifyze?"	Qualifyze is pharma-only marketplace, no engine. Hawkeye is vertical-pack engine + marketplace + AI agents — multi-vertical, configurable, embedded EQMS.
"Who are the competitors?"	Cluster 1 BigPharma EQMS (MasterControl, Veeva, TrackWise — internal-tool). Cluster 2 Salesforce-native (Dot Compliance, ComplianceQuest). Cluster 3 marketplace (Qualifyze, Rx-360). We sit at the intersection.

Gotchas

- **Cold-start lag:** First action after idle takes 5-15s (Vercel lambda + Mongo connection warm-up). Cover with talk: "watching the lambda spin up" or hit `/api/admin/ai/catalog` 30s before the demo to warm.
- **AI agents may return 403 if permissions matrix is locked:** Pre-flight — login as Elena, ensure all 12 agents are toggled on for `buyer` and `auditor` roles.
- **For-cause audit dedupe:** If UC-12 has been demo'd before in same session, the second trigger returns `existing` rather than creating new. Either delete the prior FOR_CAUSE audit OR talk through the dedupe explicitly ("idempotency in action").

§6 — Appendix

A. URLs

- Frontend: <https://hawkeye-frontend-dev-chi.vercel.app/auth/signin>
- Backend: <https://hawkeye-backend-dev.vercel.app>

B. Login table

Persona	Email	Password
Karan	buyer.purchase@acme-pharma.demo	AuditDemo@2026
Priya	audit.program@acme-pharma.demo	AuditDemo@2026
Elena	vp.quality@acme-pharma.demo	AuditDemo@2026
Maria	audit.lead@auditcorp.demo	AuditDemo@2026
Rahul	auditor.co@auditcorp.demo	AuditDemo@2026
Asha	qa.head@globalpharma.demo	AuditDemo@2026
Amit	production.mgr@globalpharma.demo	AuditDemo@2026
Deepa	qc.lab@globalpharma.demo	AuditDemo@2026
Raj	warehouse.mgr@globalpharma.demo	AuditDemo@2026
Meera	regulatory@globalpharma.demo	AuditDemo@2026

C. Pre-flight verification

Before going on stage:

```
# Backend warm + data sanity
curl -X POST https://hawkeye-backend-dev.vercel.app/api/auth/login \
  -H "Content-Type: application/json" \
  -d '{"email":"audit.program@acme-pharma.demo","password":"AuditDemo@2026"}'

# Should return token + role=buyer + adminScope=NONE + tenantId=...

# Verify aggregator returns data
TOKEN=<paste from above>
curl -H "Authorization: Bearer $TOKEN" \
  "https://hawkeye-backend-dev.vercel.app/api/suppliers/<asha-id>/quality-events?includeClosed=true"

# Should return counts.total > 0
```

D. Re-seed if needed

If the demo data is degraded:

```
cd backend
node scripts/seed-audit-only-users.mjs
```

Idempotent — only creates missing rows.

E. Tier 1+2+3 + admin governance scope

Refer to `docs/06-go-to-market/01-vision-positioning.md` for the full architectural backdrop.
