## 1. About This Guide

This guide is for **API Manufacturers operating as a supplier** who need a complete Electronic Quality Management System (EQMS) including both internal self-audits and external audits from customers.

**Your configuration:** Full EQMS — all 7 quality modules active, plus the audit engine for both internal and external (supplier) audits. 13 modules total.

| Setting          | Value      |
|------------------|------------|
| Industry Profile | PHARMA_GMP |

|                      |                                                                          |
|----------------------|--------------------------------------------------------------------------|
| Module Pack          | cGMP + EQMS                                                              |
| Active Modules       | 13 of 15 (everything except Chain of Custody and Transaction Review)     |
| Audit Types          | External (customer audits you), Internal (self-inspection), Surveillance |
| Compliance Standards | ICH Q7, ICH Q10, FDA 21 CFR 211, ISO 9001:2015                           |

## 2. Platform Overview & Module Map

Your EQMS has **13 active modules** organized into 3 tiers:

### Tier 1: Core Quality Modules (always-on)

 **Document Control**  
SOPs, policies, work instructions. Versioning, approval workflows, periodic review.  

ON

/document-control

 **Change Control**  
Process/equipment/material changes. Impact assessment, approval, verification.  

ON

/change-controls

 **Deviation / NC**  
Planned & unplanned deviations. Investigation, RCA, impact assessment, disposition.  

ON

/nonconformance

### Tier 2: Quality Operations

 **Complaint Manager**  
Customer/regulatory complaints. Investigation, regulatory reporting flags, CAPA linkage.  

ON

/complaint-manager

 **Training**  
Training assignments, competency tracking, assessment, recurring training.  

ON

/training

 **Equipment / Cal**  
Equipment master, calibration scheduling, history, out-of-tolerance handling.  

ON

/asset-management

### Tier 3: Governance & Audit

 **Management Review**  
ISO 9001 clause 9.3. KPI aggregation, action items, QMS adequacy assessment.  

ON

/management-review

 **Audit Management**  
8-phase workflow for external & internal audits. Templates, milestones, reporting.  

ON

/audits

 **CAPA**  
Corrective & preventive actions. 18-status lifecycle with RCA, effectiveness checks.  

ON

/buyer/capas

### 3. Getting Started — Setup & Configuration

#### Step 1: Login & Initial Configuration

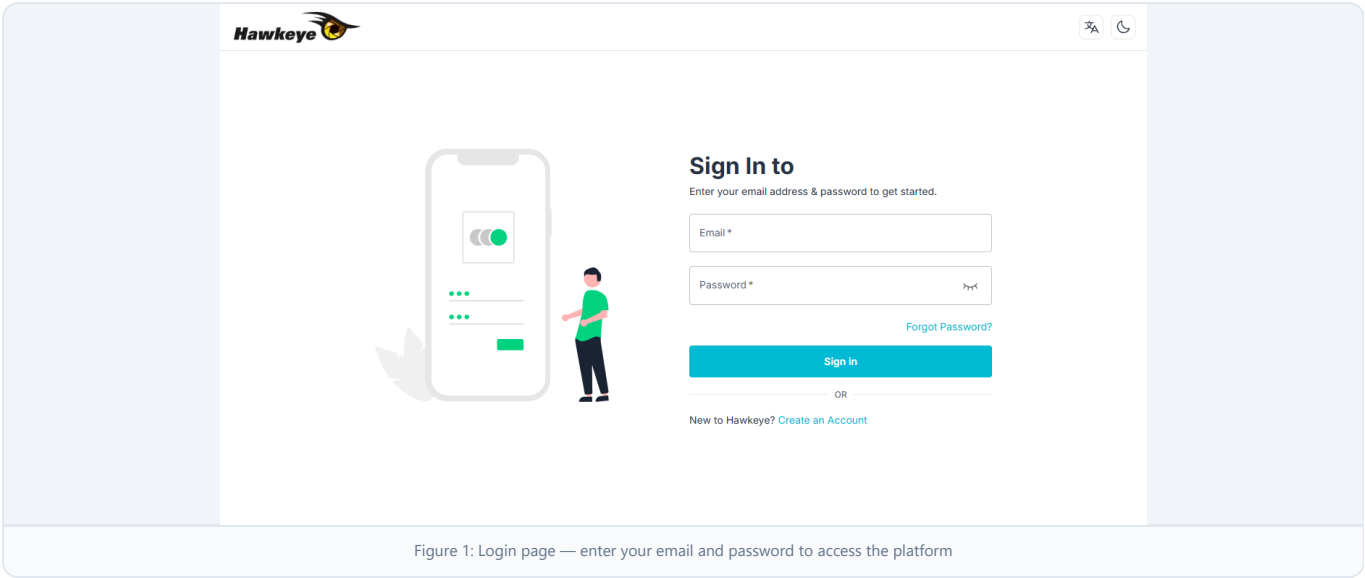

Figure 1: Login page — enter your email and password to access the platform

#### Step 2: Enable All EQMS Modules

As Tenant Admin, navigate to `/admin/module-config` and enable all modules:

| Module              | Status | Purpose                            |
|---------------------|--------|------------------------------------|
| AUDIT_MANAGEMENT    | ON     | Internal + external audit workflow |
| DOCUMENT_CONTROL    | ON     | SOP lifecycle management           |
| CHANGE_CONTROL      | ON     | Process change management          |
| CAPA_MANAGEMENT     | ON     | Corrective & preventive actions    |
| EVENT_MANAGEMENT    | ON     | Deviation/NC + complaints          |
| TRAINING_MANAGEMENT | ON     | Training & competency tracking     |
| RISK_MANAGEMENT     | ON     | Risk register & FMEA               |
| MANAGEMENT_REVIEW   | ON     | Periodic quality review            |
| ASSET_MANAGEMENT    | ON     | Equipment & calibration            |
| SUPPLIER_QUALITY    | ON     | Supplier profiles & risk scoring   |
| REGULATORY_INTEL    | ON     | FDA inspection data                |
| AI_ASSISTANT        | ON     | AskHawk knowledge assistant        |
| RFQ_PROCUREMENT     | ON     | Auditor procurement                |

#### Step 3: Set Up Users

| Role                            | Who                          | Access                                                       |
|---------------------------------|------------------------------|--------------------------------------------------------------|
| <span>buyer</span> (QA Manager) | Quality Assurance leadership | All modules + audit creation + management review             |
| <span>supplier</span> (Site QA) | Site-level quality teams     | Respond to audits, report deviations, complete training      |
| <span>auditor</span> (Internal) | Internal audit team          | Conduct internal audits, review questionnaires, log findings |
| <span>tenant_admin</span>       | Quality System Owner         | Full admin access, module config, user management            |

## 4. Module Guide: Document Control

Manages the lifecycle of all controlled documents — SOPs, policies, work instructions, specifications, protocols.

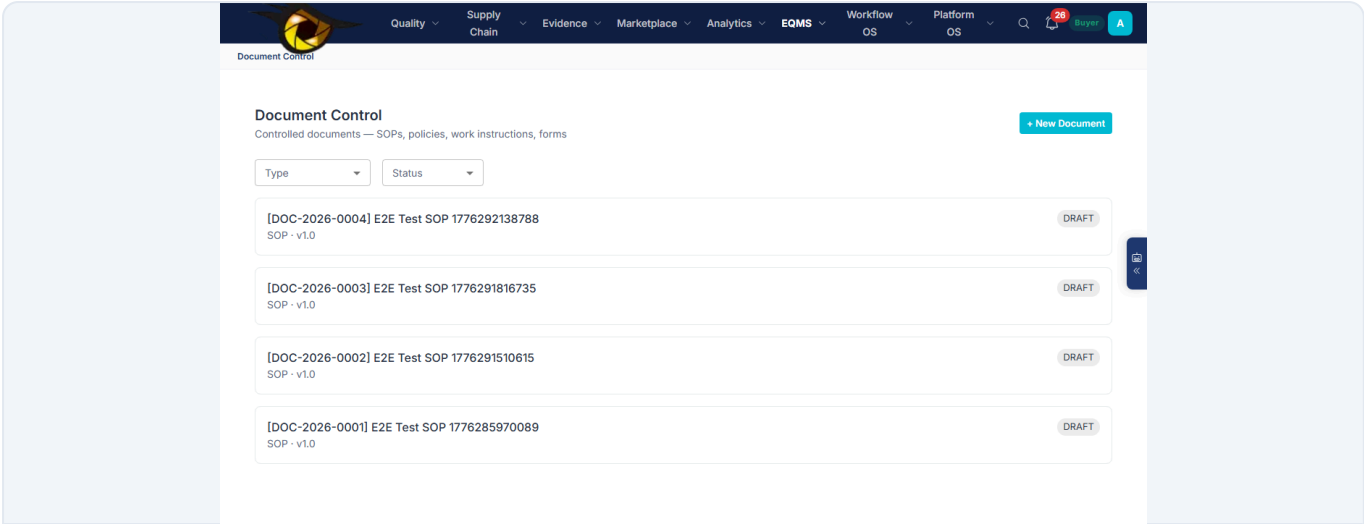

Figure 2: Document Control page — filter by status and document type

### Document Lifecycle

### How to Use

- 1 Create a document**  
Click "+ New Document". Enter title, type (SOP/Policy/Work Instruction/etc.), scope. Auto-assigns DOC-YYYY-NNNN number.
- 2 Route for approval**  
Add approval steps (e.g. Department Head → QA Manager). Each approver reviews and signs electronically.
- 3 Publish**  
Once approved, click "Publish" to make the document EFFECTIVE. Set the effective date and review due date.
- 4 Supersede (new version)**  
When a revision is needed, click "Supersede". A new version is created as DRAFT; the current version moves to SUPERSEDED.

**Training trigger:** If `requiresTrainingOnUpdate` is enabled, publishing a new version automatically triggers a training assignment for all users associated with that document's department.

| Document Types                                                                                                          | Auto-numbering                    |
|-------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| SOP, Policy, Work Instruction, Form, Specification, Protocol, Report Template, Guideline, Regulatory Submission, Custom | DOC-2026-0001, DOC-2026-0002, ... |

## 5. Module Guide: Change Control

Figure 3: Change Control page — track process, equipment, and material changes

### Change Control Lifecycle

### How to Use

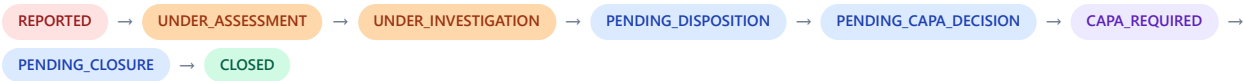

- 1 Initiate change request**  
Select type (Process/Equipment/Material/Document/System), risk level (Low/Medium/High/Critical), describe the change and justification.
- 2 Impact assessment**  
Cross-functional team evaluates: affected areas, regulatory impact, validation requirements.
- 3 Approve & implement**  
Multi-step approval workflow. After approval, track implementation against planned date.
- 4 Verify & close**  
Verify the change achieved its intended outcome. Conduct effectiveness check. Close the CCR.

## 6. Module Guide: Deviation / Non-Conformance

Figure 4: Deviation / NC Manager — investigate, assess impact, dispose, link to CAPA

Deviation Lifecycle

How to Use

- 1

**Report deviation**

Anyone can report. Classify as PLANNED or UNPLANNED. Set category (Process/Equipment/Material/Environmental/Laboratory/etc.) and classification (Critical/Major/Minor). Auto-numbers: DEV-2026-XXXX.
- 2

**Assess impact**

Evaluate: product quality impact, patient safety impact, batch disposition (Release/Reject/Rework/Quarantine), regulatory impact.
