

Run any business process. Make every step verifiable. Move from SaaS to a trust marketplace.

A platform OS for digitising business processes — AI-assisted data collection · automated processing · visualisation + analytics · **immutable record trail**. The same plumbing that runs a regulated pharma audit also runs a P2P / B2B / C2C / B2C transaction *without intermediaries* — because every step is signed, timestamped and verifiable.

JOURNEY · HOW WE GOT HERE

1

2023 · ORIGIN

Cross-company audit workflow

Started as a 2-sided audit platform: buyer + supplier + auditor on one record, with a shared event log.

2

2024 · VERTICAL DEPTH

API pharma → full EQMS

Followed market demand into pharma manufacturing, then expanded to all 14 EQMS modules covering every regulated quality function.

3

2025 · BREADTH

Multi-vertical supply chains

Same workflow + data + AI engine applied to food, ESG, automotive, professional services — regulated and non-regulated alike.

4

2026 · TRUST OS

Marketplace + disintermediation

AI-assisted data + blockchain-anchored records turn the SaaS into a trust marketplace where parties transact directly.

WHAT'S BUILT TODAY (LIVE · MULTI-TENANT SAAS)

Workflow + Data SaaS layer

- Universal workflow engine (definitions · milestones · SLAs)
- 165 data models · 92 backend routes · multi-tenant Atlas
- 14 EQMS modules + supplier + audit + RFQ marketplace shipped
- Per-tenant module flags + 7 normalised user roles
- S3 storage · DigiLocker integration · notification policies

AI + Automation Intelligence layer

- 31 AI agents wired across deviation · CAPA · audit · supplier · MRM
- Public-data fusion: openFDA · EMA · WHO PQ · FDA Warning Letters
- Pluggable LLM (free Gemini default · OpenAI · on-prem option)
- Grounded generation runtime: citation gate · confidence floor · accept/reject audit log
- FDA Jan-2025 AI guidance compliant from day one

Trust + Marketplace Network layer

- 21 CFR Part 11 e-signature service (PASSWORD · MFA · SSO · cert)
- SHA-256 content hashes on audit reports + closures
- 2-sided audit RFQ marketplace (buyer ↔ auditor org) live today
- ALCOA+ audit trail on every state transition + every AI decision
- Roadmap: Sigstore / blockchain anchoring of integrity hashes

THE THESIS · WHY THIS BECOMES A MARKETPLACE OS

Trust replaces the intermediary

When every workflow step — data captured, document signed, decision made, AI accepted — is signed, timestamped and content-hashed, the parties no longer need a broker / aggregator / registrar to vouch for the transaction. The record itself is the trust.

SaaS → Marketplace evolution

Phase 1 (today): tenants pay SaaS to digitise their internal processes. Phase 2 (in flight): tenants discover counterparties on the platform (auditor RFQ marketplace already live). Phase 3 (roadmap): direct B2B / B2C / P2P / C2C transactions settle on Hawkeye because the full chain of evidence is portable + verifiable.

VERTICALS EXPANSION (SAME ENGINE)

- Pharma · API + EQMS
- Medical device
- Food · FSMA / HACCP
- Automotive · IATF
- Aerospace · AS9100
- Cosmetics
- ESG · Scope 1-3
- Professional services
- Construction QA
- Education credentialing
- Logistics · CoC

TRANSACTIONS ENABLED · NO INTERMEDIARY

- B2B · supplier ↔ buyer
- B2C · brand ↔ customer
- P2P · auditor ↔ auditor
- C2C · creator ↔ buyer
- Audit RFQ · live
- Cert. issuance
- Provenance claim
- Compliance attest.

Why this matters. Every regulated industry today depends on intermediaries — auditors, registrars, certifiers, exchanges — because data isn't natively trustworthy. Hawkeye's bet is that **verifiable workflow + AI-assisted data + immutable record** collapses the need for those middlemen across *any* vertical, regulated or not. Land as SaaS for the workflow; expand to a marketplace for the transactions; capture both the seat fee and the take-rate. EQMS + audit is just the first wedge.
