

1 · What Hawkeye does

Hawkeye is an AI-native EQMS SaaS for pharma manufacturers — built around how QA actually runs the day.

Audit, deviation, CAPA, doc + change control, training, risk, complaints and management review — in one platform — with built-in supplier collaboration and a vetted auditor / supplier marketplace.

WHAT WE ARE

- An EQMS SaaS — your full QMS lives here
- Multi-tenant — your suppliers + auditors collaborate on the same record without you mailing PDFs
- AI-first — agents draft, summarise, classify and pre-fill; humans approve
- Marketplace-enabled — find qualified auditors / suppliers without leaving the system

WHAT WE ARE NOT

- Not a custom-built ERP module
- Not a paper-replacement form-builder
- Not an audit-only point tool

Why this matters for Sanpras

You are export-ready and WHO-GMP certified.

Your buyers in regulated markets (US / EU / RoW) audit you frequently. Hawkeye gives them a self-serve supplier portal so audits run on shared data — not over email.

You are a contract manufacturer.

Your QA team supports many SKUs across many buyers. Hawkeye's multi-buyer collaboration model means you fill a PAQ once and share — no more re-typing the same answers for each buyer.

You are growing.

SaaS pricing fits — no infrastructure or in-house IT to host. Onboard one module, then turn the rest on as you grow.

You need to defend data integrity.

Every regulator's #1 finding theme. Hawkeye's 21 CFR 11 + Annex 11 controls are built-in — not bolt-on. (Section 3 below.)

2 · AI-native first — module-by-module value

Hawkeye is AI-native: every module ships with at least one AI agent that drafts, summarises, classifies, or pre-fills work that a QA professional would otherwise do by hand. Humans always approve. Citations are mandatory. No black-box decisions.

Audit Management

TODAY (MANUAL)

Auditor manually drafts each observation in Word, copy-pastes evidence, formats CFR refs.

WITH HAWKEYE AI

AI drafts citation-traced observations from evidence + linked questions — auditor edits, signs.

🕒 **Per audit: 6–10 hrs of report drafting → ~1 hr review.**

📖 **ICH Q9(R1) + 21 CFR 211 — drafting only, citations mandatory, human approval gates use.**

Deviation / Event Management

TODAY (MANUAL)

Investigators type 5-why trees from scratch; root-cause clustering relies on memory.

WITH HAWKEYE AI

AI suggests 5-why branches, finds similar past deviations, drafts the investigation summary.

🕒 **Per investigation: 3–5 hrs saved; repeat-finding detection → 30 % fewer recurring CAPAs.**

📖 **ICH Q10 §3.2.2 — uses controlled history + flags repeats.**

CAPA Management

TODAY (MANUAL)

CAPA owners write generic action plans; effectiveness checks slip.

WITH HAWKEYE AI

AI drafts CAPA RCA, suggests target dates, monitors effectiveness signals across batches.

🕒 **CAPA cycle time: typically 60 → ~30 days; effectiveness compliance: +35 %.**

📖 **21 CFR 820.100 + ICH Q10.**

Document + Change Control

TODAY (MANUAL)

SOPs reviewed annually; change-impact analysis done by hand on a checklist.

WITH HAWKEYE AI

AI flags SOPs out-of-step with new regs (FDA / EU GMP / ICH); drafts the change-control impact section.

🕒 **SOP-update lag: months → days; one missed update averted = one observation prevented.**

📖 **21 CFR 211.100 / 211.180 + EU GMP Ch. 4.**

Training

TODAY (MANUAL)

Coordinator manually assigns training when SOPs change; misses 5–10 % of affected staff.

WITH HAWKEYE AI

AI auto-assigns training on SOP / role / equipment changes — closes the loop with quiz scoring.

🕒 **Coordinator time: –60 %. Training-gap audit findings: typically 0 from this category.**

📖 **21 CFR 211.25 + EU GMP Ch. 2.**

Risk Management

TODAY (MANUAL)

FMEA / ICH Q9 done in Excel once a year; rarely refreshed.

WITH HAWKEYE AI

AI brainstorms scenarios, scores severity / occurrence / detectability, links risks to CAPAs.

🕒 **Risk-review cycle: 1×/yr → continuous. Material risk identified earlier (avg. ~90 days).**

📖 **ICH Q9(R1).**

Complaints + Recall

TODAY (MANUAL)

Complaints triaged manually; clustering across batches missed.

WITH HAWKEYE AI

AI triages severity, clusters similar complaints, surfaces a possible recall trigger.

🕒 Triage time: -70 %. Recall decisions surfaced ~2 weeks earlier on average.

📖 21 CFR 211.198 + EU GMP Ch. 8.

Supplier Quality + Audit (collab + marketplace)

TODAY (MANUAL)

Pre-audit questionnaires emailed as Word docs; supplier responses re-typed; finding lists tracked in Excel.

WITH HAWKEYE AI

Supplier fills the PAQ in-product — AI pre-fills from prior submissions / public data; auditor + buyer + supplier all see the same live record.

🕒 Audit prep: 2-3 weeks → ~3 days. Supplier qualification cycle: 50 % shorter.

📖 ICH Q7 §17 + EU GMP Ch. 7 — supplier qualification + audit traceability.

Management Review (MRM)

TODAY (MANUAL)

QA prepares MRM inputs by hand from 6 systems; quarterly cycle stretches a fortnight.

WITH HAWKEYE AI

AI auto-aggregates KPIs, deviations, audits, CAPAs, complaints, risks → MRM deck in one click.

🕒 MRM prep: 2 weeks → 1 day. Continuous KPI view between meetings.

📖 ICH Q10 §4 + EU GMP Ch. 1.

Regulatory Intelligence

TODAY (MANUAL)

Reg-affairs reads FDA / EMA / CDSCO bulletins; manually maps to internal SOPs.

WITH HAWKEYE AI

AI watches warning letters, EU GMP updates, ICH revisions; flags relevant to YOUR products + sites.

🕒 Time to react to a new reg: months → days. Surprise findings: ↓ materially.

📖 Continuous regulatory horizon-scanning — preventive control.

The compounding effect. Each module saves time on its own. But the real win is the integrated record: a deviation auto-creates a CAPA, the CAPA auto-triggers a doc-control change, the change auto-assigns training, the training closes the loop in MRM. *One platform · one audit trail · one set of citations.*

3 · The marketplace layer — discovery without the cold-email tax

Hawkeye runs a two-sided network on top of the EQMS. Other tenants on the platform — buyers looking for qualified CMOs, and CMOs looking for independent third-party auditors — can discover, vet and engage you (and you them) without leaving the system. The marketplace is opt-in per tenant and per record.

As a supplier — be discoverable to global buyers

- Your WHO-GMP certificate, regulatory inspection history, product portfolio (liquid-oral, non-beta-lactam, pain-relief, antibiotic, cough-syrup) and capacity become a single live profile — kept current automatically as your QMS data updates.
- Buyers searching for a Nashik / India / liquid-oral / WHO-GMP CMO see you ranked by relevance. Your facility's audit history (anonymised by default) gives them confidence.
- Inbound RFQs and audit-intimation requests land directly in your QA inbox — no cold-email triage, no Excel tracking.

As a buyer of audits — find qualified third-party auditors

- When your customer asks for an independent auditor (or your QMS asks for an internal-vs-external rotation), pick from the marketplace's vetted auditor pool: filter by region (India / EU / US), by therapeutic expertise, by language, by certifications (ASQ CQA, IRCA, BSI lead-auditor).
- COI declarations, qualification status, calendar availability and rate cards are all on-screen before you assign — not negotiated over email.
- Engagement, scoping, scheduling and the audit itself all happen in the same record — no SOW exchange, no parallel tools.

Why this network compounds

- Every audit you complete (yours or others') anonymously enriches the benchmark — what's a typical observation count for an API CMO? what CAPA-cycle time is best-in-class? — so your QA leadership sees where Sanpras stands without paying a consultancy.
- Trust signals (on-time CAPA closure rate, audit-readiness score) are computed from your real Hawkeye data, not self-attested. They become reusable proof you can show to any new buyer.

Guardrails — because we know you'll ask.

- Opt-in only. Your data never appears in the marketplace unless you explicitly publish a profile or accept a request.
- No trade-secret leakage. Marketplace profiles surface what you choose; the audit record itself stays bilateral between you and your counterparty.
- Walk-away clean. Off-board your tenant and your marketplace profile is removed; your private QMS data exports cleanly.

4 · 21 CFR Part 11 + EU GMP Annex 11 compliance

Hawkeye is built from the ground up for regulated electronic records and electronic signatures. The same evidence pack covers **both** 21 CFR Part 11 (US) and Annex 11 (EU) — so you don't pay twice when you expand markets.

CONTROL	HOW HAWKEYE IMPLEMENTS IT
Electronic signatures	Username + password + reason-for-signing on every controlled action. Optional 2nd-factor / biometric.
Audit trail	Every create / update / delete records who, what, when, old → new value, and reason. Immutable, append-only.
Time-stamped records	Server-side UTC timestamps on every event; tamper-evident hashes per record.
Access control (RBAC)	Role + module + record-level permissions. Periodic access-rights review built in.
System validation (CSV)	IQ / OQ / PQ documentation pack delivered with every tenant. Test scripts run on each release.

CONTROL	HOW HAWKEYE IMPLEMENTS IT
Data integrity (ALCOA+)	Attributable, Legible, Contemporaneous, Original, Accurate — plus Complete, Consistent, Enduring, Available.
Backup + recovery	Daily encrypted snapshots, 30-day point-in-time recovery, geo-redundant storage.
Annex 11 (EU GMP)	Equivalent controls implemented. Same evidence pack covers both 21 CFR 11 + Annex 11.

What you get on day 1. A signed CSV / IQ-OQ-PQ pack for your tenant, the audit-trail report for inspectors, and an Annex-11-ready Quality Agreement template.

Your inspector won't ask "is this Part 11 compliant?" — they'll ask "show me." We give you the binder.

5 • Privacy + security

Your QMS data is your most sensitive operational data — formulations, deviations, supplier disputes, regulatory correspondence. Hawkeye treats it that way.

AREA	POSTURE
Tenant isolation	Hard tenant scoping at every query layer. No data ever crosses tenant boundaries (already validated in our own pen tests).
Encryption	TLS 1.3 in transit. AES-256 at rest. KMS-managed keys with rotation.
Authentication	Email + password + 2FA. SSO (SAML / OIDC) for enterprise. Passwords hashed with bcrypt.
Pen-testing	Annual third-party VAPT. Critical / High findings closed before customer release.
Standards alignment	SOC 2 Type II controls. ISO 27001 controls mapped. GDPR + India DPDP Act ready.
Hosting	AWS / Vercel cloud — inherits CSP-level physical + network security. Data-residency options: India, EU, US.
Incident response	On-call 24×7. Customer notification within 24 h of any confirmed incident affecting tenant data.
Data export + deletion	Self-serve full export of your tenant data. On-request deletion with proof of erasure.

India DPDP Act

Data fiduciary obligations met — purpose limitation, consent records, breach reporting workflow, data-subject rights endpoints. Optional India-only data residency.

Audit + access logs

Every login, export, and admin action is logged and reviewable by your tenant admin — not just by us. You see who saw what, when.
