1. Module overview

Module	Internal Audit (8-phase lifecycle)
Pharma purpose	Run a supplier or internal audit through 8 sequential phases — INITIATED → PREP → PLANNING → EXECUTION → FINDINGS → CAPA → CLOSURE → SURVEILLANCE. Each phase owns specific artifacts. Role gates enforce buyer/supplier/auditor collaboration.
Compliance basis	ISO 19011 (auditing management systems) · ISO 9001:2015 §9.2 · 21 CFR 211.180 · ICH Q10 §3.2.4 · EU GMP Chapter 9
Hawkeye routes	/audits, /buyer/audits, /auditor/audits (frontend) · /api/audit-requests, /api/audits (backend)
Hawkeye model file	backend/src/models/auditRequestsMasterModel.js
Tenant module flag	modules.AUDIT_MANAGEMENT

An audit transitions through 8 phases sequentially. Each phase has phaseStatuses NOT_STARTED → IN_PROGRESS → COMPLETED → BLOCKED. Buyer creates the request, supplier accepts and runs PREP, auditor PLANS + EXECUTES + LOGS findings, supplier validates findings + submits CAPA, buyer reviews + signs CLOSURE certificate. AI assists at PREP (questionnaire generation), EXECUTION (auditor coach), and FINDINGS (report assembly with SHA-256 integrity hash).

2. Standard pharma EQMS vs Hawkeye — gap analysis

Each row is a capability a pharma QA team would expect from an EQMS deviation module. Hawkeye column shows what's actually shipped. MET
= parity, PARTIAL = ships but with caveats, GAP = not implemented yet.

9. Known gaps + roadmap

- Full 8-phase E2E lifecycle test** — Need 3-persona orchestration spec (buyer + supplier + auditor) walking each phase + uploading the right artefacts. **HIGH**
- Auto-generate CAPA candidates from major+ findings on FINDINGS phase** — Today buyer must click 'Generate CAPAs from findings'. Auto-fire would close the loop. **MEDIUM**
- Surveillance scheduler** — Cadence-based reminder for follow-up audit per supplier risk band. **MEDIUM**
- Auditor Coach UI panel** — Backend endpoint exists; wire into auditor console. **MEDIUM**
