

Per-Vertical Pitches

Hawkeye Go-To-Market Pack · 2026-04-26

Per-Vertical Pitches

Five verticals: pharma + medical device shipped at depth; ISO 9001, food safety, automotive shipped as stubs. Owner: founder · Last updated: 2026-04-26 · Status: draft

Each pitch follows the same 8-section template:

1. **Headline** — one sentence positioning for the vertical
2. **Market** — sizing band, regulatory drivers, growth signal
3. **Standards in scope** — what the pack speaks
4. **ICP** — who the buyer is, where they are
5. **Top pain points** — 3, in customer language
6. **Top competitors** — who they buy today
7. **Hawkeye pack — what's in it** — modules + AI agents specialized for the vertical
8. **The one differentiator** — the line that wins this vertical

Where market figures are not freshly cited, they are tagged [directional] — replace with up-to-date analyst data before customer-facing use.

A. Pharma — *the lighthouse vertical, shipping today*

Headline

"AI-native supplier qualification + audit + CAPA for pharma — full EQMS plus a marketplace of pre-qualified suppliers. \$30-60k/yr instead of \$300k."

Market

- Pharma EQMS sub-segment ~**\$1.6-1.9B in 2025, growing at ~13% CAGR through 2030** [directional — update with live analyst report].
- Drivers: 21 CFR Part 11 modernization, FDA QMSR effective Feb 2026 (med-device parallel), EMA Annex 1, supplier-base globalization, FDA warning-letter velocity.
- Shared-audit market (Qualifyze + Rx-360 model) growing far faster than legacy EQMS — **proxy for the marketplace thesis.**

Standards in scope

ICH Q7 §17 · ICH Q9 (QRM) · ICH Q10 §2.7 · 21 CFR 211.84 · 21 CFR Part 11 · 21 CFR 314.81 (FAR) · 21 CFR 803 (MDR) · EU GMP Part II · EU GMP Annex 1 · WHO TRS 957 · WHO PQ.

ICP

- **Primary:** SMB-mid pharma manufacturers + CMOs/CDMOs (50-1,500 employees), QA team of 5-30, mostly India / EU / Israel / mid-tier US.
- **Secondary:** BigPharma supplier-quality teams (10-50 buyers) buying Hawkeye as a *complement* to MasterControl/Veeva for the supplier-network slice.
- **Buyer:** Audit Program Manager / VP Quality / Head of Supplier Quality.

Top pain points

1. **Audits don't scale.** A buyer covers 200-1,200 suppliers but can audit 30-60/yr in person. Most are paper-screened only.
2. **Questionnaire fatigue.** Suppliers fill the same 200-question pre-audit questionnaire 40 times a year for different buyers — bad data, late, error-prone.
3. **Findings → CAPA → closure** loop runs in email + Excel. No source-of-truth, no SLA, no trend.

Top competitors

- **MasterControl** (US, \$25k-500k+/yr) — Supplier Excellence as add-on, no marketplace.
- **Veeva Vault QMS** (\$600-2,400/user/yr) — supplier portal, no marketplace.
- **TrackWise Digital** (\$100k+/yr enterprise) — same internal-tool DNA.
- **Qualifyze** (Germany) — **the marketplace head-to-head**; 5,000+ shared audit reports, pricing per-report.
- **AmpleLogic / Sarjen QEdge / Caliber** (India) — pharma-specific EQMS, no marketplace, India cost base.

Hawkeye pack — what's in it

- **EQMS core:** Document Control · Change Control · Training · Risk · Management Review · Internal Audit · Deviation · CAPA · Complaint · Equipment · Batch Records · Supplier Pre-Qualification · RFQ · Audit (8-phase lifecycle).
- **Marketplace:** buyer browses suppliers + product catalog + audit history + risk; supplier free profile + premium listing; 3rd-party auditor pool + COI.
- **AI agents (Wave 2 + audit-agents):** Pre-Audit Questionnaire pre-fill (Gemini · KB-grounded) · Supplier-Intel (openFDA + warning letters + EMA + WHO PQ fusion) · Audit Report Assembler (ICH Q7 framing) · Observation Drafter (cross-tenant pattern reuse) · CAPA RCA Drafter (5-Whys / fishbone) · Risk Brainstormer.
- **Schedulers:** OVERDUE flagger (training / MRM / CAPA / equipment) · Auto-EXPIRE (PQ + RFQ) · FAR clock (3-day) · MDR clock (5/15/30 day).

The one differentiator

"Marketplace + AI on top of the workflow OS — buy the EQMS, get access to 100+ pre-audited suppliers and AI agents that pre-fill 80% of every questionnaire."

B. Medical Device — vertical pack #2, shipping Q4 2026

Headline

"FDA QMSR + ISO 13485 + EU MDR — one workflow OS, AI-assembled Design History Files, and a

Market

- Med-device QMS sub-segment ~**\$1.2-1.5B in 2025**, accelerating with **FDA QMSR effective Feb 2026** (replaces 21 CFR 820, harmonizes with ISO 13485) [directional].
- EU MDR transition forcing reclassification + technical-file upgrades through 2027 — large pull for QMS modernization.

Standards in scope

ISO 13485:2016 · FDA QMSR (Feb 2026, replaces 21 CFR 820) · ISO 14971 (risk) · IEC 62366 (usability) · IEC 62304 (software) · EU MDR 2017/745 · EU IVDR 2017/746 · MDSAP.

ICP

- **Primary:** Class II/III device manufacturers + IVD makers (50-1,000 employees), small QMS team but heavy regulatory burden.
- **Secondary:** Contract sterilizers, contract manufacturers (CDMOs for med-device), suppliers of injection-molded components.
- **Buyer:** Director of Quality / Reg Affairs Lead.

Top pain points

1. **Design controls + DHF compilation.** DHF is a binder that nobody fully controls; reviewers hate it; FDA inspectors find gaps.
2. **Complaint** → **MDR clock** is mission-critical — 5/15/30 day (21 CFR 803) — and most teams run it in Outlook tasks.
3. **Supplier qualification for medical components** is unevenly enforced — small suppliers refuse to engage; their absence shows up as 483s.

Top competitors

- **Greenlight Guru** (\$30-50k/yr SMB-friendly) — strong design-controls UX, weaker supplier-audit and AI.
- **MasterControl Med Device** (\$50k+) — same EQMS as pharma.
- **ZenQMS** (~\$25-60k/yr) — SMB-friendly EQMS.
- **Qualio** (~\$20-50k/yr) — generic life-science SMB.
- **Veeva Vault QualityOne** — mid-market.

Hawkeye pack — what's in it

- **Reuse from pharma** (~70%): Document Control · Change Control · CAPA · Risk · Training · Internal Audit · Supplier Pre-Qual · Audit · Marketplace · AI agents.
- **Vertical-specific additions:**
 - **Design Controls + DHF assembler** module (design inputs/outputs, V&V matrix, traceability, DHF binder generator).
 - **Complaint module — MDR clock automation** (already shipped — 5d MDR / 15d critical / 30d otherwise).
 - **EU MDR technical-file template.**
 - **Sterilization-validation tracking** (ISO 11135 / 11137 dosimetry) for sterilizer-supplier audits.
- **Vocabulary swap:** "GMP audit" → "QMS audit" · "deviation" → "nonconformance" · "Field Alert Report" → "Medical Device Report".

- **Vertical AI agent: DHF Assembler** — reads design-input docs + V&V protocols + risk file → drafts the Design History File outline with traceability matrix.

The one differentiator

"AI-assembled Design History Files. Saves 40-60 hours per device family per year. No competitor has this."

C. ISO 9001 — *the cheapest pack, fastest to ship (Q1 2027)*

Headline

"Generic ISO 9001:2015 QMS for SMB manufacturers and services — vocabulary-overlay pack, \$15-30k/yr."

Market

- ISO 9001 has the largest installed base of any QMS standard — **~1.1M ISO 9001 certificates worldwide** [ISO Survey 2023, directional].
- Most SMB ISO 9001 buyers don't have an EQMS — they run Word + SharePoint. The market is **deep but price-sensitive**.

Standards in scope

ISO 9001:2015 · ISO 19011 (audits) · sector-specific overlays (AS9100 for aerospace, IATF for auto — separate packs).

ICP

- **Primary:** SMB manufacturers + service businesses (20-500 employees) building toward / maintaining ISO 9001 certification.
- **Buyer:** Quality Manager (often single-person QA team) or part-time Quality Lead reporting to Operations.

Top pain points

1. **Internal audits done annually in panic** before certification body visit — no continuous quality posture.
2. **Document control** lives in network shares — change control is unsigned.
3. **Management review** happens once a year, by panic, by Excel.

Top competitors

- **ETQ Reliance** (\$25k+/yr) — heavy.
- **InteleX** (Fortive) — mid-market, expensive.
- **Mango QHSE** (NZ) — SMB-friendly.
- **Q-Pulse** — UK SMB.
- **Ideagen Q-Pulse / Plato** — mid-market.

Hawkeye pack — what's in it

- **Reuse from pharma** (~80%): Document Control · Change Control · Training · Risk · Internal Audit · Management Review · CAPA · Supplier Pre-Qual.

- **Vocabulary swap:** "GMP audit" → "Quality audit" · "deviation" → "nonconformity" · "ICH Q7" → "ISO 9001 §7-§10".
- **Modules disabled in pack:** Batch Records · Equipment · Complaint MDR clock · FAR clock.
- **Vertical AI agent: ISO 9001 audit-readiness scorer** — reads tenant's documents + recent CAPAs + management-review minutes → outputs readiness % + top-5 risks before cert-body visit.

The one differentiator

"\$15-30k/yr ISO 9001 EQMS that includes internal-audit + management-review + supplier mgmt — and the AI tells you what to fix before your cert auditor finds it."

D. Food Safety — vertical pack #4, roadmap 2027

Headline

"FSMA + HACCP + BRCGS — supplier compliance + recall blast-radius simulator + AI allergen risk scoring."

Market

- Food safety QMS market **~\$0.8-1.1B**, growing on FSMA Sec 204 traceability (effective Jan 2026) [directional].
- Driver: traceability-by-lot mandates + brand-protection ROI.

Standards in scope

FSMA (FDA) · HACCP · BRCGS Food Safety Issue 9 · SQF · ISO 22000 · GFSI.

ICP

- **Primary:** Food + beverage manufacturers (20-2,000 employees), copackers, ingredient suppliers.
- **Buyer:** VP Food Safety / Quality Manager / Compliance Director.

Top pain points

1. **Recall blast radius** — when a contaminated lot is traced back, "which of my 800 customers got which lot?" is unanswered.
2. **Supplier compliance audits** for ingredient suppliers — no shared-audit network exists.
3. **Allergen control + label-claim drift** when supplier substitutes an ingredient mid-spec.

Top competitors

- **SafetyChain** (\$30-100k/yr) — HACCP + SPC focus.
- **FoodLogiQ / Trustwell** — traceability + supplier compliance.
- **Compli** — HACCP plans.
- **TraceGains** — ingredient/spec mgmt.
- **Mango QHSE** — SMB.

Hawkeye pack — what's in it

- **Reuse from pharma** (~50%): Document Control · CAPA · Supplier Pre-Qual · Audit (rebranded) · Training · Risk Register.
- **Vertical-specific additions:**
 - **HACCP plan module** (CCP definition, monitoring frequency, deviation handling).
 - **Lot traceability + recall blast-radius simulator** — query "which lots used this raw material?" + "which customers got which finished lots?".
 - **Allergen matrix + spec-drift detector**.
- **Vertical AI agent: Recall Blast-Radius Simulator** — give it a lot ID + suspected hazard → returns affected finished-product lots + customer ship-list + recall-notice draft.

The one differentiator

"FSMA Sec 204 traceability + AI recall blast-radius simulator. Most competitors stop at HACCP — we close the loop to your customers."

E. Automotive (IATF 16949) — vertical pack #5, roadmap 2027

Headline

"IATF 16949 + APQP + PPAP for tier-2/3 auto suppliers — AI-drafted PPAP packages + customer-specific-requirement (CSR) overlays per OEM."

Market

- Automotive QMS market ~\$0.6-0.9B, dominated by Plex (Rockwell) + IQS [directional].
- Driver: tier-2/3 supplier consolidation + EV-supply-chain re-shoring.

Standards in scope

IATF 16949:2016 · APQP (Advanced Product Quality Planning) · PPAP (Production Part Approval Process) · FMEA · MSA · SPC · CSRs (customer-specific requirements) per OEM (Ford, GM, Stellantis, Toyota, etc.).

ICP

- **Primary:** Tier-2 / tier-3 automotive suppliers (50-2,000 employees) — injection molders, machine shops, electronics assemblers.
- **Buyer:** Quality Manager / APQP Lead.

Top pain points

1. **PPAP submission packages** are a 30-150 page assembly per part per customer — done by hand in Excel + PDFs. Late PPAP = lost program.
2. **Customer-specific requirements (CSRs)** vary by OEM — what Ford wants for PPAP is different from GM. Each program team rebuilds the CSR matrix.
3. **Supplier APQP cascade** — when you commit a delivery date to your OEM, your suppliers must commit theirs upstream. No shared workflow.

Top competitors

- **Plex Smart Manufacturing** (Rockwell, \$50-200k/yr) — full ERP+QMS, heavy.
- **IQS** (\$20-80k/yr) — APQP + PPAP focus.
- **SAP QM** — only inside SAP-shop.
- **Siemens Opcenter Quality** — large enterprise.
- **Omnex** — consulting + tools.

Hawkeye pack — what's in it

- **Reuse from pharma** (~50%): Document Control · CAPA · Supplier Pre-Qual · Audit (rebranded) · Training · Internal Audit.
- **Vertical-specific additions:**
 - **APQP phase tracker** (5 phases, deliverables, gate reviews).
 - **PPAP package builder** (18 elements: design records, FMEA, control plan, MSA, etc.).
 - **CSR overlay library** (Ford / GM / Stellantis / Toyota / Honda — each as a configurable overlay on top of the IATF baseline).
 - **8D corrective action workflow** (auto industry's CAPA equivalent).
- **Vertical AI agent: PPAP Package Auto-Drafter** — reads design records + control plan + FMEA → assembles the 18-element PPAP package + flags missing items + drafts customer-cover-letter.

The one differentiator

"AI-drafted PPAP packages. Cuts PPAP cycle time from 6 weeks to 2. Plex won't build this; IQS doesn't have AI."

Cross-vertical decision matrix

Question	Pharma	Med-Device	ISO 9001	Food	Auto
Pack ships	live	Q4 2026	Q1 2027	2027	2027
Buyer ACV (engine + pack)	\$30-60k	\$40-80k	\$15-30k	\$25-50k	\$30-70k
Marketplace fee per shared audit	\$2-4k	\$3-5k	n/a (cert auditors)	\$1-2k (FSVP)	\$2-4k (PPAP review)
Vertical-specific AI agent	Supplier-Intel	DHF Assembler	Audit Readiness Scorer	Recall Blast-Radius	PPAP Auto-Drafter
% code reuse from pharma core	—	~70%	~80%	~50%	~50%
First design-partner target	shipped 5+	engage Q3 2026	engage Q4 2026	engage Q1 2027	engage Q1 2027
Single biggest competitor	Qualifyze	Greenlight Guru	ETQ Reliance	SafetyChain	Plex

What to ship next

- **Med-device discovery** — 5-10 calls with med-device QA leaders to validate the **DHF Assembler** as the wedge (Q3 2026).
- **ISO 9001 SMB pricing test** — public pricing page with \$15k entry tier — test-and-learn (Q3 2026).
- **Don't ship food + automotive packs early** — both have heavy domain-specific scope (HACCP / PPAP); only build when there's a paid design partner.
