

Executive One-Pager

Hawkeye Go-To-Market Pack · 2026-04-26

Hawkeye — Executive One-Pager

Track A · for VP/CXO/Head-of-Quality. Two-minute read. Time-and-cost focused. Pair with Doc 6b (IT/Security Validation) when handing to the buyer's IT team.

Why this exists

You run quality across 200-1,200 suppliers, on a team of 5-30 people. **You can audit 30-60 of them in person each year.** The rest get paper-screened, late. CAPAs run in email. Findings get re-litigated. Every renewal cycle, your CFO asks why your EQMS contract is \$300k/yr.

Hawkeye is **the AI-native supplier-quality network** that lets your team cover 5x more suppliers with the same headcount, and proves it on a dashboard you can show the CFO at renewal.

What you get on day 1

Module	What it does
Audit · 8-phase lifecycle	Initiated → Prep → Planning → Scheduling → Execution → Reporting → CAPA → Closure — fully wired with AI agents at every phase.
Supplier Pre-Qualification	Risk-based pre-qual workflow with auto-bridge to a full audit when approved.
Supplier Marketplace (beta)	Browse 100+ pre-qualified suppliers. License a shared audit report for \$2-4k instead of running a \$40k audit yourself.
CAPA + Findings + Reporting	Full closure-loop with e-signatures (21 CFR Part 11).
AI Agents · 12 of them	Pre-fill questionnaires (saves 20-40 min each) · draft observations · assemble report · suggest CAPA RCA · score supplier risk from public FDA data.
EQMS core	Doc Control · Change Control · Training · Risk · Internal Audit · Management Review · Equipment · Batch Records · Deviations · Complaints.

Sold as one bundle for \$30-60k/yr per vertical pack. Not a \$300k enterprise contract.

The agentic value — where the AI actually helps

What used to take	Now takes	Saved per occurrence
Pre-audit questionnaire (200 questions) — 4-8 hrs	AI pre-fill + supplier review — 1 hr	3-7 hrs
Public-data scan of supplier (openFDA + warning letters + EU GMDP + WHO PQ) — 30-60 min	Supplier-Intel agent — 30 sec	30-60 min
Audit report drafting from findings — 6-12 hrs	AI report assembler + auditor review — 2 hrs	4-10 hrs
CAPA root-cause analysis (5-Whys, fishbone) — 30-60 min	RCA drafter + supplier review — 10 min	20-50 min
Risk scenario brainstorming for new product — 2-4 hrs	Risk Brainstormer + team review — 30 min	1.5-3.5 hrs
Complaint triage (severity + MDR clock) — 20-30 min	Complaint Triage agent — 30 sec	20-30 min

For a 50-user pharma tenant doing 5,000 agent calls/month: ~~1,250 hours/month saved. At \$40/hr loaded labor cost, **\$50,000/month value**.~~ LLM cost: ~\$300/month. **ROI multiple: ~150x.**

The Hawkeye Admin Panel includes a real-time **ROI Dashboard** — you take this screen to your CFO at renewal. We've sized renewals to lose if the ROI doesn't materialize.

What's distinctive

- **Marketplace-native, not a portal.** Suppliers have public profiles. Audit reports can be licensed by other buyers (\$2-4k each). Your audit budget goes 5x further.
- **AI is in every workflow, not a side panel.** 12 agents wired into Audit / CAPA / Risk / Deviation / Complaint / Training / Change.
- **Vertical-pack architecture.** One workflow OS, packaged per vertical (pharma now, med-device Q4 2026, ISO 9001 Q1 2027). When you expand into a new vertical, you don't replatform.
- **No Salesforce tax.** Hawkeye runs on its own infrastructure — you're not paying for a Salesforce license you don't use.
- **India cost base.** Engineering and audit ops both run from India. Same compliance, half the price of US-built EQMS.

Pricing — the two SKU layers

Layer	What it is	Price
Engine + AI core	Workflow runtime · agent runtime · marketplace access · base UI · Admin Panel · ROI dashboard	\$10-25k/yr
Vertical pack	Standards library · module template · vocabulary · AI prompts · marketplace seed	\$20-60k/yr per pack
Per shared-audit (optional)	Buyer pulls an audit report from the marketplace	\$2-4k/report

A pharma-only buyer pays \$30-60k/yr base. Add a vertical (med-device): +\$40-80k. Add 5,000 AI calls/month overage (rare): +\$300-600/month.

Deployment options (your IT will ask)

Model	When
SaaS (default)	Most SMB-mid pharma. Multi-tenant. Cloud LLM.
Private Cloud (single-tenant)	EU/SOX/HIPAA-strict. Customer's AWS/Azure. Cloud LLM via VPC. +50% to +100% premium.
Hybrid	Data stays in your VPC; Hawkeye runs orchestration. PII redacted before LLM call. +30% to +75%.
On-prem (airgapped)	BigPharma R&D, regulatory-restricted geos. On-prem Llama 70B / Mixtral. +150% to +300%.

Hawkeye's app is identical across SaaS and on-prem — only the LLM endpoint changes via env var.
Your IT can validate the architecture once.

What you should do

1. **Take this one-pager + the IT validation pack (Doc 6b) to your IT/Security team this week.**
2. **Schedule a 30-min walkthrough.** We'll demo the audit-only flow + the AI agents on your real (anonymized) supplier list.
3. **Start with one product line — one vertical pack.** Land in 60 days. Expand on month-3 ROI evidence.
